## DURAFINISH OUTDOOR STAMPED STEEL CROSS BASES

TUBE BOTTOM (BOTTOM)

Welded anchor plate at bottom of tube.  
Anchor plate also has a welded nut on back of anchor plate.

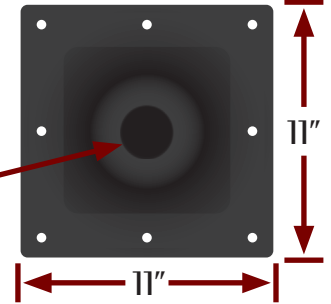

SPIDER / TUBE TOP (SIDE)

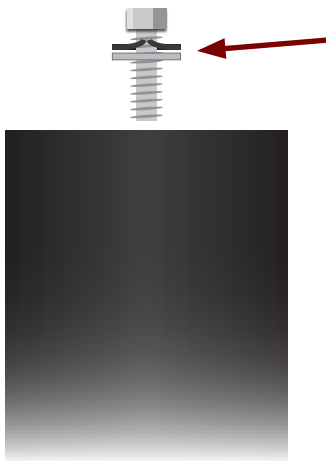

Oak Street's spiders are bigger than most competitors - providing additional strength & durability

Spider is welded to the tube  
1-3/4" umbrella hole in the spider

SPIDER (TOP)

TUBE BOTTOM (SIDE)

Oak Street uses a short bolt to screw into the welded anchor plate. This is a much improved method than the competitors, which use a long rod that will torque & stretch when force is applied - making it permanently loose.

Our bolt also has both a lock washer & a flat washer. The flat washer keeps the lock washer from catching on the anchor plate, preventing the bolt from becoming loose.

BASE (TOP)

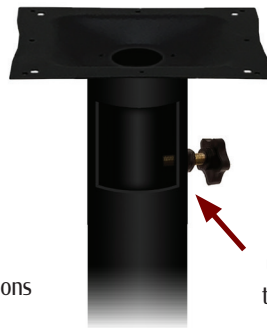

Stamped Steel base - most competitors use cast iron bases, which is a soft & brittle metal.

BASE (BOTTOM)

Welded glide tabs with hollow back - not possible with cast iron bases - drastically reduce the chances of having a bad tab for glides.

- Specially coated (DURAFINISH) to withstand outdoor conditions
- Constructed of black stamped steel for unparalleled strength & stability - will not fracture under heavier weights like cast iron bases
- Easy two-piece construction for quick assembly
- Includes non-marring adjustable levelers
- Spider attaches to tabletop with (8) 3/4" - #10 screws
- Recommended to use 1 size larger base for bar height applications
- Compatible with 3" or 4" standard height or bar height tubes

Inner steel tube and tension bolt located underneath the spider to stabilize umbrellas in outdoor conditions.
